MIXSON'S HIGH GRADE SEEDS

FOR SUMMER AND FALL PLANTING

August 1, 1919

All quotations are F. O. B. Charleston, subject to market changes and our being unsold. To parties rated by the Mercantile Agencies our terms are Clovers, Vetches, Grasses and Grains, net cash; Garden Seed, 30 days. Unrated parties should send references with order if they desire to open an account.

W. H. MIXSON SEED CO., CHARLESTON, S. C.

Importers, Growers and Dealers in Vegetable, Field and Farm Seed

CLOVERS

CRIMSON CLOVER

This is by far the most popular Clover in the South. Practically any soil in the South will grow it. It is an excellent soil improver, a fine cover and grazing crop, as well as a hay crop. Crimson Clover seed this season is cheaper than it has been for several years, and this should result in an increased use of this valuable legume.

RED CLOVER

On some of the stiff red clay soils in the South, Red Clover does better than the Crimson. Price of seed, however, is much higher than the Crimson Clover, though a smaller quantity can be sown per acre.

BURR CLOVER

One of the most valuable winter and spring grazing Legumes we have, with the added advantage that it re-seeds itself very easily and therefore when it once establishes itself, a permanent winter pasture is established. It is in no way in the nature of a weed, as it can be very easily eradicated, if you later decide to use the land for something else. Our seed is in the burr which carries sufficient inoculation.

FOR OTHER CLOVERS SEE PRICE-LIST ON LAST PAGE

ALFALFA

This is the crop out of which Millions have been made in the West, and which grows just as successfully in many sections of the South. Three or four cuttings can be gotten per year, and one seedling lasts from four to eight years. The importance of good seed can therefore easily be seen, for even if a few cents be saved on the seed, hundreds and thousands may be lost on account of the crop not producing as it should. All of our seed tests 99 $\frac{1}{2}$ % pure, is grown in this country, and on non-irrigated land. Investigate well the source of your Alfalfa seed before planting.

HAIRY OR WINTER VETCH

The great Winter hay and soil improving crop of the South. On account of its viney habit, it should be planted with either Rye or Oats. Before the war, all of the Vetch seed used in this country came from Russia, and importations have not yet started. Some of this seed is produced in this Country now, but it does not nearly fill the demand, hence the high price. Experts tell us, however, that even at the high price of seed it is a paying proposition to plant Vetch.

AUGUSTA VETCH (*Vicia Augustifolia*) and OREGON OR SPRING VETCH (*Vicia Sativa*) are quoted on the last page. Be sure you get the Vetch you buy as there is a great difference in price.

DWARF ESSEX RAPE

Rape produces in the shortest time the largest quantity of green food of any Winter Legume or grass. Keeps stock in the very best of shape, and is invaluable for hogs or cattle. Can be grown practically anywhere in the South, and can be planted almost any time. Is not a legume, and produces best with fertilizer.

HIGH GRADE SEED GRAINS

ABBRUZZI RYE

This is the earliest and quickest growing Rye that we offer, and is specially suited if early pasturage is wanted. The stock that we have is pedigreed, being selected from field that threshed out 32½ bushels to the acre.

CAROLINA TALL GROWING

This is a variety of which we sell thousands and thousands of bushels. It will not grow off as fast as the Abbruzzi, but our experience is that it will make a better cover crop, as it stools out more. It will give a good grazing crop, and furthermore will stand more cold than the Abbruzzi. Results of several years test at Ferndale have given us this information. Price, as you will note, is a great deal lower. See last page for quotations.

SEED OATS

FULGHUM OATS

The variety that is being planted more and more each year. It is a very heavy Oat, and is early. For this reason it is very often planted in the Spring. Our stock comes from pedigreed seed, is re-cleaned, and selected for uniformity, germination, and cleanliness. We also stock APPLER, BANCROFT, HUNDRED BUSHEL, TEXAS RUST PROOF. See full prices on last page.

SEED WHEAT

LEAP'S PROLIFIC, FULTZ, RED MAY, BLUE STEM, PURPLE STRAW

These are the leading smooth head or beardless varieties. All of our Wheats are grown in excellent wheat growing sections of the South, where a pure strain can be obtained. All of the stock is re-cleaned, and put up in new 2½ Bu. bags.

FULCASTER

Is the leading Bearded sort. Many prefer a bearded Wheat as they say that it will stand more adverse weather than a smooth Wheat.

Prices on WHEAT and BARLEY have not yet been named by us. When ready to buy be sure to ask us for prices. You will be sure of getting good straight stock from us, and possibly we can save you a little money.

MIXSON'S PERPETUAL PASTURE MIXTURE

Contains several valuable grasses and clover, selected so that one reaches maturity after the other, and in this way a succession is formed which will furnish you with a continuous pasture. Results obtained on our Ferndale Trial Grounds justify our recommending this mixture to anyone wanting such a pasture.

FARMOGERM

A fortunate purchase enables us to make a very low price on this inoculation. As long as stock of each crop lasts, we can name this price, but we are liable to be sold out at any time.

Orders for Farmogerm filled only when accompanied by orders for Seed. Cultures on hand for all Clovers, Vetches, Alfalfa, etc. Price, 50c. per acre.

SEASONABLE STOCKS OF GARDEN SEEDS

All of the varieties marked (*) can be supplied in lithographed packets. A great many dealers prefer to handle in this way, and it shows an extremely good margin of profit. The smaller packets retail at 5c. each and the larger at 10c.

All Small Seeds including Turnip, Ruta Baga, Cabbage, Beet, Collard, etc....2.50 per 100
All Beans5.00 per 100

All of our stocks of SEEDS have been selected from fields that have been inspected and grown especially for seed. They have all been recleaned, a great deal of this work being done in our own building under our immediate supervision. Tests are made every year at our Ferndale Farms for trueness to and adaptability of strain, and repeated tests are made for germination. However, it is absolutely impossible to tell results after that seed has been put into the ground, and therefore, we, as do all other members of the American Seed Trade Asso. give no warranty expressed or implied as to description, quality, productiveness or any other matter of any seeds we send out, and will not be responsible for the crop. The customer is allowed 10 days for examination and test, and if not satisfactory, we are to be notified at once.
